TOTAL: 1754 canisters/casks (1563 thin-wall canisters (W) + 191 thick-wall casks (B)) as of 6/30/2013									

B/W: W = welded lid thin-wall canister (1/2" to 5/8" thick) stainless steel in vented overpacks, unless noted otherwise in Model*)

B = bolted lid thick metal cask (10" to 15" thick) used for both storage and transport (no air vents)

First Load: first year one or more canisters/casks loaded

Total: total canisters/casks loaded between First and Last Load dates for each model at storage facility

Assm/Cask: number of fuel assemblies per canister/cask

2018 Age: number of years earliest canisters/casks loaded as of 2018. Data as of 6/30/2013

Last Load: last year one or more canisters/casks loaded

***Model:** HI-STAR HB Humboldt Bay (1/2" thick) thin-wall canisters in unvented bolted-lid thick metal casks below ground

VSC-24 Arkansas, Palisades, Point Beach (1" thick) thin-wall carbon steel canisters

Sort: earliest date canister/cask loaded within each State

Source: DOE EIA inventory of commercial power reactor independent spent fuel storage installations (ISFSI) as of 6/30/2013
